

KeepTally Test Environment UAT Field Tester Checklist

Field tester PDF | Test site: <https://test.keeptally.ai> | Date: 2026-06-03

Purpose: Use this form to record what works, what does not work, and any feedback for the development team. Do not use real customer inventory data unless the test coordinator approves it.

Tester Information

Tester name	
Date tested	
Device	
Browser	
Network	
Test account username	
Assigned location tested	

Result options: Pass, Fail, Partial, Not tested, Not applicable.

Login And Access

Test	Result	Notes
Open https://test.keeptally.ai		
Cloudflare Access login works if prompted		
KeepTally login screen loads		
Username field accepts input		
Password field accepts input		
Eye icon shows and hides password		
Sign In button works		
Invalid login shows a clear message		
Successful login opens the dashboard		
Logout works if available		

Feedback:

Dashboard

Test	Result	Notes
Dashboard loads without a blank page		
Summary cards show inventory information		
Low stock or status areas load		
Location selector is visible if expected		

Test	Result	Notes
Changing location updates visible data		
Page feels responsive on desktop		
Page feels responsive on mobile		

Feedback:

Store Inventory

Test	Result	Notes
Inventory list loads		
Search or filtering works if available		
Location filter works		
Item detail values are readable		
Create item workflow opens		
Edit item workflow opens		
Quantity adjustment works with a reason		
Verify item action works		
Saved changes appear after refresh		
User cannot access locations they should not see		

Feedback:

Mobile Scanner And Barcode Flow

Test	Result	Notes
Scanner page opens		
In-app scanner requests camera permission		
Camera works over HTTPS		
Denying camera permission shows manual entry fallback		
Manual barcode entry works		
Existing barcode lookup finds the correct item		
Unknown barcode shows a safe not-found or create flow		
Repeated scan does not create duplicate updates		
Scanner action requires confirmation before saving		

Test	Result	Notes
Saved scanner action appears in history		
iPhone Camera can open a KeepTally scan link but does not write inventory automatically		
Android Camera can open a KeepTally scan link but does not write inventory automatically		
External or spoofed QR URL is not trusted as an inventory action		
Native scan still requires KeepTally login		
Native scan still requires selected location		

Feedback:

Store Voice Count

Test	Result	Notes
Voice count page opens		
Location selection works		
Count mode selection works		
Start AI voice count button works		
Browser asks for microphone permission		
Recording indicator is visible while speaking		
Saying an item and count creates a transcript		
App asks for confirmation before saving		
Verbal confirmation such as yes or confirm is accepted		
Verbal rejection such as no or skip is accepted		
Verified, updated, and skipped counters update correctly		
OpenAI voice response is audible if enabled		
Saved voice count appears in history		

Feedback:

Restock

Test	Result	Notes
Restock page loads		
Low-stock items are visible if available		
Location filtering works		

Test	Result	Notes
Export or restock action works if available		
Values match inventory expectations		

Feedback:

History

Test	Result	Notes
History page loads		
Recent inventory changes appear		
Scanner action appears after scanner save		
Voice count action appears after voice save		
Filters work if available		
History entries show useful user, item, location, and reason details		

Feedback:

Warehouse

Test	Result	Notes
Warehouse page loads		
Warehouse item list loads		
Warehouse item detail opens		
Create or edit warehouse item works if tester has permission		
Receive purchase workflow works if tester has permission		
Transfer to store workflow works if tester has permission		
Warehouse purchase history loads		
Warehouse voice count opens if tester has permission		

Feedback:

Orders And Route Sheets

Test	Result	Notes
Orders page loads		
Create order or pick list works if available		
Order detail opens		
Print order page opens		
Route sheets page loads		
Create route sheet workflow works if available		
Route sheet details are readable		

Feedback:

Import

Test	Result	Notes
Import page loads		
CSV or spreadsheet file can be selected		
Preview shows expected item names and quantities		
Bad file format shows a clear error		
Apply import works if coordinator approves write testing		
Import result shows created, updated, skipped, or failed counts		

Feedback:

AI Insights

Test	Result	Notes
AI insights page loads		
Page shows operational insights or an understandable empty state		
Any refresh or conversation controls work if available		
AI output is understandable to a non-technical user		
AI output does not modify inventory without confirmation		

Feedback:

Admin Users

Test	Result	Notes
User management page loads		
Create user workflow works		
Edit user workflow works		
Role or permission changes save correctly		
Location assignment changes save correctly		
Password reset or must-change-password flow works		
Non-admin user cannot access admin page		

Feedback:

Settings

Test	Result	Notes
Settings page loads		
Any visible settings are readable		
Placeholder or unavailable features are clearly labeled		

Feedback:

Issue Report

Field	Tester entry
Page or workflow	
Device and browser	
User account	
Location selected	
Steps to reproduce	
Expected result	
Actual result	
Screenshot or screen recording attached	
Severity	
Business impact	

Final UAT Summary

Field	Tester entry
Could you complete the assigned workflow?	
Was anything confusing?	
Did any page feel too slow?	
Did voice or scanner behavior fail?	
Did the data look accurate?	
Would you be comfortable using this in a live test with supervision?	
Top three improvements requested	

Tester Sign-Off

Field	Tester entry
Tester name	
Date	
Overall result	
Signature or typed approval	

Tester note: If a workflow is unavailable because of account permissions, mark it Not applicable and describe what happened in Notes.
